

Tirumala is located 980 metres (3,200 ft) above sea level and covers an area of approximately 26.8 square kilometres (10.33 sq mi). Surrounding the hills are seven peaks of Seshachalam range, Eastern Ghats namely Seshadri, Neeladri, Garudadri, Anjanadri, Vrushabadri, Narayanadri and Venkatadri. The temple of Sri Venkateswara^[6] is on the seventh peak (Venkatadri).

At the 21 km (13 mi) point on the Tirupati – Tirumala Ghat road, there is a major discontinuity of stratigraphic significance that represents a period of remarkable serenity in the geological history of the Earth. This is referred to as the Eparchaeon Unconformity. This unconformity separates the Nagari Quartzite of the Proterozoic from the granite of the Archean, representing a time gap of 800 Mya.^[7] In 2001, the Geological Survey of India (GSI) declared the Eparchaeon Unconformity to be one of the 26 "Geological Monuments of India".
